**Can a solar panel charge a cordless power tool?**

Solar power is a great way to get electricity to remote project sites. One simple way to do this is to use a solar panel to charge the batteries of your cordless power tools. In this project, I am going to show you several ways that you can do that.

**What voltage does a solar panel need?**

To charge a battery using a solar panel, the panel needs an open-circuit voltage higher than the battery's fully charged voltage. You can measure the open-circuit voltage of the panel using a multimeter when it's in bright sunlight.

**What does the charger connect to in a cordless tool battery pack?**

In the most basic models, the charger will connect directly to the end terminals of the battery pack at two exposed pins. Most cordless tool battery packs are made up of several smaller batteries that are all wired together in series.

**How does a cordless tool battery pack work?**

A cordless tool battery pack consists of several smaller batteries wired together in series. In basic models, the charger connects to the battery pack's exposed pins and applies a small direct current, charging the pack over several hours.
