What is a 20ft foldable container?

The 20ft foldable container is a brand-new temporary building with a simple and elegant appearance design and a steel frame, which is full of modern fashion sense. It not only provides a multi-functional space but also can be folded and transported on a large scale, which saves transportation costs as well as reduces storage space.

What is a 20ft container used for?

A 20ft container is the most common type used to have cargo transported and for general purpose safe storage space. These waterproof units make excellent temporary offices, pop-up shops, food trucks, or barricades at outdoor events. Along with the standard container size, we also sell and lease 10ft and 40ft units.

What are the benefits of foldable containers?

The purported benefits of foldable containers are numerous (if not yet proven). They are said to be able to not just reduce transportation costs, congestion and carbon footprint, but also alleviate space constraints at seaports (e.g. Konings and Thijs, 2001, Bandara et al., 2015 ).

How will foldable containers affect exporters?

Despite the increase in operational complexity, one foreseeable impact of foldable containers is that the availability of empty containers for exporters should logically improve, since carriers would find it cheaper to rebalance stocks of foldable containers between IPI locations, as represented in Leg F of Fig. 2.
