What is a hybrid inverter?

A hybrid inverter is essentially two inverters in one. It combines a solar inverter and a battery inverter into one simple unit. These advanced inverters use solar energy to power your home, charge a battery, or send excess energy into the electricity grid. Most hybrid inverters can also provide emergency backup power during a blackout.

What is a 48V Hybrid inverter?

This 48V, split-phase hybrid inverter is perfect for rural and suburban homeowners seeking energy independence. Seamlessly integrating into existing systems, it offers unmatched performance and versatility for both residential and light commercial applications.

What is a 48V solar inverter?

A 48V solar inverter converts direct current (DC) generated by solar panels into alternating current (AC), specifically designed for 48V battery systems. Its higher voltage design minimizes energy loss during transmission, making it ideal for medium-to-high power applications such as home energy storage, small farms, or communication towers.

How does a 48V inverter work?

Some 48V inverters come integrated with charging capabilities (known as inverter chargers), offering:

- Solar Charging: Charge batteries via solar panels.
- Grid Charging: Supplement energy from the grid during low sunlight.
- Automatic Switching: Seamlessly transition between power sources for uninterrupted supply.
