-----

Its core task is real-time monitoring, intelligent regulation, and safety protection to ensure that the battery operates at its optimal state, extend its lifespan, and prevent accidents ...

A battery management system (BMS) is any electronic system that manages a rechargeable battery (cell or battery pack) by facilitating the safe usage and a long life of the battery in practical scenarios while monitoring and estimating its various states (such as state of health and state of charge), calculating secondary data, reporting that data, controlling its environment, authenticating or balancing it.
