What is a distributed collaborative optimization approach for 5G base stations?

In this paper, a distributed collaborative optimization approach is proposed for power distribution and communication networks with 5G base stations. Firstly, the model of 5G base stations considering communication load demand migration and energy storage dynamic backup is established.

What is the architecture and coordination optimization model of 5G base station?

The architecture and coordination optimization model composed of a 5G communication network and distribution network is proposed in Section 3. Afterward, a distributed coordination algorithm is designed in Section 4 with simulation results presented in Section 5. Finally, Section 6 concludes the paper. 2. Model of 5G base station

What is a 5G base station?

At the same time, a large number of 5G base stations (BSs) are connected to distribution networks , which usually involve high power consumption and are equipped with backup energy storage, , giving it significant demand response potential.

What is a collaborative optimal operation model of 5G base stations?

Afterward,a collaborative optimal operation model of power distribution and communication networks is designed to fully explore the operation flexibility of 5G base stations,and then an improved distributed algorithm based on the ADMM is developed to achieve the collaborative optimization equilibrium.

The future 5G base station power box will be driven by "intelligence, efficiency, and green" as its core driving force, and through modular design, semiconductor material innovation, and ...

Apr 13, 2022&ensp;&#0183;&ensp;Accelerating the delivery of connectivity service infrastructure The Company speeded up building the "information highway" in 2021 to meet the needs of digital-intelligent ...
