What is battery management system (BMS)?

Battery Management System (BMS) is the "intelligent manager" of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

How do battery management systems work?

Battery management system (BMS) is technology dedicated to the oversight of a battery pack, which is an assembly of battery cells, electrically organized in a row x column matrix configuration to enable delivery of targeted range of voltage and current for a duration of time against expected load scenarios.

Why is a battery pack monitored by a BMS?

Each cell or group of cells in the battery pack is continuously monitored by the BMS to make sure they are operating within the specified parameters. Monitoring is crucial for real-time management as well as for gathering information that may be used to forecast the battery pack's future performance and health.

What is a multi-master battery management unit (BMS)?

NX-Tech's BMS offers a parallel pack control which provides an advantage for scalable, modular battery architectures suitable for: A multi-master BMS allows multiple Battery Management Units (BMUs) to coordinate as peers within a battery system.

A battery pack's performance, use, and safety are monitored and managed by a battery management system (BMS), an intelligent electronic device. ...
