-----

This study analyzes two CSP-PV hybrid configurations--parabolic trough and solar tower--in diverse Brazilian climatic conditions. Particular focus is given to Bom Jesus da Lapa, ...

Brazil enjoys a combination of a favourable natural environment and solar energy market design that keeps pushing costs down. Brazil experiences a global horizontal irradiation (GHI) of 5.0 ...

The total installed solar power in Brazil was estimated at 53.9 GW at February 2025, which consists of about 21.9% of the country's electricity matrix. In 2023, Brazil was the 6th country in the world in terms of installed solar power capacity (37.4 GW). Brazil expects to have 1.2 million solar power generation systems in the year ...

While recent reductions in fossil fuel subsidies have improved policy coherence, significant incoherencies between policy instruments impede renewable energy expansion. Increasingly ...

In Brazil, the first solar thermal systems were installed in the 1970s, but it was not until the 1990s when the systems start to be installed in a professional way, in answer to a ...
