Can solar panels be installed on a commercial roof?

If you're considering installing a residential or commercial solar panel system, you might wonder if your roof type is appropriate for a solar installation. The good news is that solar panels can be installed on just about any roof type, but the installation process and mounting hardware might vary from material to material.

What is solar panel roof mounting?

Solar panel roof mounting is the process of securely attaching photovoltaic panels to your home's roof structure using specialized mounting systems. This critical installation step determines both the safety and performance of your solar energy system for decades to come.

Do I need a structural assessment before installing solar panels?

Before mounting solar panels, your roof must undergo a thorough structural assessment. Solar panels and mounting equipment add approximately 3-4 pounds per square foot of additional load to your roof structure. Key evaluation factors include: If your roof needs replacement, complete this work before solar installation.

Which roof is best for solar panels?

No one type of roof is best for solar panels - mounting solutions exist for just about every roof out there. Some roofs will cost more to mount solar panels on. This is due to the different equipment installers need to use. Start comparing customized solar quotes today on the EnergySage Marketplace.
