How do I choose a DC to AC power inverter?

When choosing a DC to AC power inverter to run an air conditioner (AC) unit, the first thing you need to consider is the size of the air conditioner or the amount of BTU's or AMP's required to run it. All electronics have a power label that will list the running wattage and amp requirement, or with AC units, it might show BTU's.

How much DC power does an inverter use?

If you're using an inverter to power some 120v appliances like a microwave or induction burner it takes 10 times the 12v power to make the 120v power. So you need to multiply the amp consumption of those devices by 10 to see how much DC power they'd take. Actually, because the inverter isn't 100% efficient, it's better to multiply by 13.

Do I need a 60Hz inverter?

Here in the US, things run at 60Hz, in Europe and most other places around the world, things run at 50Hz. You'll most likely require a 60Hz inverter if you are running a device intended to run on US power. We like to go camping and travel quite frequently.
