How many energy storage projects are in Chile?

Currently, 36 of the 129 large-scale projects Latin America projects with an energy storage component under development are in Chile, including 32 out of 71 of the region's early works projects. The storage technologies either in use or being considered include:

What kind of energy does Chile use?

Chile has the potential to run exclusively on renewable generation, with an estimated energy mix of 46% solar, 31% wind, 12% hydroelectric, and 8% flexible natural gas power plants, as well as 23% of battery storage capacity. The remaining 2% is split between biomass, geothermal, and other less common energy sources.

How much battery storage capacity does Chile have?

According to data from Acera, the Chilean Renewable Energy Association, there are only 64 MW of battery storage capacity currently active, representing 0.2% of national capacity. AES Andes, a subsidiary of U.S. company AES Corp. operates all 64 MW at their Angamos and Los Andes substations.

How much energy does Chile need to replace coal?

In addition, Chile will need an estimated 9.5 GW of new flexible capacity over the next decade to fully replace coal and to achieve a significant drop in emissions necessary to meet the government's climate goals.

Latin America's largest solar power plant with battery storage inaugurated in Chile Built by ContourGlobal in the Antofagasta region, the facility has 221 MWp of solar capacity ...

The technological diversity of energy storage projects in Chile is remarkable. From battery storage systems to innovative projects with gases such as CO₂, the country is exploring different ...

Limes Renewable Energy has secured the Environmental Qualification Resolution (RCA) for its Pradera
