What is an IP55 rating in outdoor cabinets?

The IP rating on enclosures is an international protection standard that indicates how well the cabinet is protected against two factors: the ingress of dust or solid particles, and the ingress of water.

Are IP55 cabinets better than IP56 cabinets?

IP55 cabinets are more cost-effective and suitable for standard applications. IP56 cabinets are more expensive but necessary for harsher environments. IP56 cabinets offer better long-term protection, reducing maintenance and replacement costs in challenging environments. Summary

What is an IP55 rating?

The correct IP classification directly affects the stable operation of installed equipment. One of the most widely used protection levels is IP55. In this article, we explain what an IP55 rating is, how protection against dust and water is achieved, and which design features allow an IP55 enclosure to withstand outdoor and industrial environments.

What does IP55 mean?

The IP55 marking includes two digits that determine the nature and intensity of the enclosure's protection against external influences. The first digit "5" means that the cabinet is protected against dust to a level that prevents particles from interfering with the operation of telecom, electrical, or industrial equipment.

Telecom cabinets are vital in preserving network uptime, reducing maintenance costs, and preventing catastrophic equipment failures. A key protective element also housed within these ...

Durable Materials: Choose from galvanized steel, stainless steel, or aluminum for superior corrosion resistance and longevity. Robust Ratings: Available in IP55, IP65, NEMA 3R, NEMA ...
