What is a proinsener solar inverter station?

Proinsener Solar inverter stations are designed and integrated specifically for each project. It is an easily installable and compact product perfect for generating solar power on a large scale. All this allows easy and quick field connection to the medium voltage transforming station (MV), which reduces transport and installation costs.

How a photovoltaic inverter station works?

In each inverter station all of the necessary equipment is integrated to connect to the medium voltage network of the photovoltaic plant, always complying with the standards of performance and quality required according to the project and its location.

What is an ABB inverter station?

The ABB inverter station design capitalizes on ABB's long experience in the development and manufacture of secondary substations for electrical authorities and major end-users worldwide in conventional power transmission installations. The station houses two ABB central inverters and embedded auxiliary power, monitoring and air filtration systems.

How does ABB inverter work?

It enables easy and rapid connection to a MV transformer station. Depending on the size of the PV power plant, several ABB inverter stations can be used to meet the capacity need. The housing is based on a standard, insulated, steel-framed 20-foot shipping container. The total package weighs only 10 metric tons.
