Does Mo improve corrosion resistance in solar salt?

Considering the effect of Mo, which is known to improve resistance to localized corrosion in aqueous media, its benefit on corrosion rate in Solar Salt could not be established, considering that corrosion resistance of AISI 316/316L, 317L and OC-4 does not differ significantly from that of Mo-free alloys.

Which corrosion products are formed in solar salt?

Adapted from Ref. . The principal corrosion products formed in Solar Salt are  $\text{FeCrO}_4$ ,  $\text{Fe}_2\text{O}_3$ , and  $\text{MgFe}_2\text{O}_4$ , indicating the importance of Mg impurity in the electrolyte for the formation of oxide layer, and also a less dense and less protective outer layer of  $\text{NaFeO}_2$  was identified ,,

How does a corrosion pit affect fatigue life and failure mode?

The geometry of corrosion pit, which typically initiates the crack, was found to influence fatigue life and failure mode by varying degrees depending on temperature and strain range.

The high Z and ZM coatings open up undreamt-of possibilities for the harshest environmental conditions or piling profiles. Even relatively new designs such as floating solar plants or agro ...

The cabinet processing of solar energy storage containers needs to cope with challenges such as extreme environments, safety protection upgrades, structural load-bearing reinforcement, and ...

The requirements for mounting systems in photovoltaic plants are extremely diverse: In addition to the different types of plants, such as ground-mounted or roof-mounted, the statics, design and ...

Since energy storage cabinets are often placed outdoors, corrosion and weather resistance on their interior and exterior surfaces are crucial. Tuyi powder coatings, with their excellent ...
