How much does solar PV cost in Africa?

On-grid commissioned and planned utility-scale solar PV projects between 2014 and 2018 in Africa range from around USD 1.2 to USD 4.9/W (USD 1 200 to 4 900/kW). Although Africa is currently home to a very small set of utility-scale solar PV projects, costs have been declining over time.

How much solar capacity is installed in Africa in 2024?

Published in partnership with RMI and supported by GET.invest, this report serves as a key reference for policymakers, investors, and industry professionals seeking insights into Africa's evolving solar sector. 2.4 GW of new solar capacity was installed in Africa in 2024.

Does Africa have solar power?

Africa holds vast solar potential, with 60% of the world's best solar resources, yet solar PV currently accounts for only 3% of the continent's electricity generation. As global efforts intensify to triple renewable energy capacity by 2030, Africa's role in achieving this target is more critical than ever.

Will Africa get more solar power in 2025?

However, this growth is still a fraction of the immense solar potential in Africa, and it is essential to tap into this resource to meet global climate goals and the tripling of renewables target. In 2025, 18 African countries are expected to install at least 100 MW of new solar capacity- up from just two in 2024.
