How much do airport construction projects cost in Africa?

Source: CAPA - Centre for Aviation Airport Construction Database (ACD). There are 24 known infrastructure projects at existing airports in Africa, to a value of USD2.3 billion, or USD96 million each on average; well below the average figure elsewhere. Construction projects at existing airports in Africa tend to be on a smaller scale than elsewhere.

What factors should be considered when building an airport in Africa?

From an airport perspective, the following factors need to be considered: Airport infrastructure in most African countries is outdated and not built to serve the growing volume of passengers or cargo. Airlines and airports are often managed by government entities or regulatory bodies. High cost of construction.

Can bespoke models help improve airport infrastructure development in Africa?

It is evident that there is no one size fits all option of financing, designing bespoke models to cater for the African market may prove to be the effective way through leveraging the private sector to improve airport infrastructure development.

Does Africa need a better air transport infrastructure?

Provided by the Springer Nature SharedIt content-sharing initiative African aviation has witnessed steady growth pre-COVID and as result of increased demand for air travel, there is an urgent need to improve the air transport infrastructure. This chapter examines the underlining complexities and challenges that are undermining the...

Instead of large-scale, integrated systems, small airports can benefit from modular smart solutions for specific pain points. For instance, smart parking systems, automated check-in kiosks, or ...

In this study, we have identified the influence on safety of large-scale PV systems installed in airports areas.
