-----  
Can a DC UPS be added to a data center?

When additional racks of IT and communications equipment are required for data center growth, new DC UPS units can be added without disruption. The NetSure™ ITM integrates power conversion, battery backup and branch distribution into a compact, highly reliable power protection system.

What is a data center facility & critical power solution?

We provide Data Center Facility & Critical Power solutions for data center operators and enterprises in their journey towards intelligent computing, so as to power the digital era forward! Explore a modern data center facility with an integrated data center power solution that improves infrastructure efficiency, reliability, and scalable growth.

What is a data center-optimized DC power protection system?

A data center-optimized, row-based DC power protection system is now available to help data center operators take advantage of that opportunity.

What is a DC power system?

DC power system that helps meet the power requirements of telecom central office and mobile switching office applications. The power system can provide up to 20,000A output capacity in integrated, multi-cabinet configurations that implement three-phase three-wire rectifiers for commercial 208/240VAC or 480VAC power.
