Singapore will achieve its target of having "giant batteries" to store at least 200MW of energy three years early. The 200MW system is currently being installed across two sites ...

SummaryElectricity GenerationOverviewHistoryFossil fuelsRenewable energy sourcesElectricityCompaniesIn 2019, around 95 per cent of Singapore"s electricity is produced using piped or liquefied natural gas (LNG). Natural gas remains a key fuel for Singapore"s power generation as it scales up efforts to harness solar and develop other low-carbon technologies. In 2025, electricity generation in Singapore via natural gas remained at 95 percent. In 2012, Singapore conducted a pre-feasibility study on the deployment of nuclear energy in Sin...
