What is a use case for energy storage?

Energy storage is used in several applications within electricity systems. It is used to protect network infrastructure by a Distribution Network Operator (DNO) for voltage control, increasing reliability, black start, and thermal management. Another use case is network level coordinated thermal storage in homes to balance the local electricity network (e.g., Nines project). Use case 4

What is the business case for battery energy storage?

The business case for battery energy storage varies by application and use case. For 'prosumers' (producers-consumers), the payback period of a home energy storage system can be calculated based on the spread between the cost of producing and storing rooftop solar power and the cost of purchasing electricity from the local utility.
