In response to the growing demand for sustainable and efficient energy management, this paper introduces an innovative approach aimed at enhancing grid-connected multi-microgrid ...

To address the problem of wind and photovoltaic curtailment, the hierarchical dispatching method is utilized to realize the optimal accommodation of wind and photovoltaic ...

Abstract This paper proposes a novel daily energy management system for optimization dispatch and operation control of a typical microgrid power system. The multi-objective optimization ...

First, this study proposed an unused capacity-sharing strategy for the RES to fully utilize the storage's unused capacity and elevate the storage's service efficiency. Second, ...

To improve the resilience of remote power systems, a coordinated pre-positioning and dispatching method of mobile electric-hydrogen energy storage (MEHES) containing mobile electric ...

Keywords: Microgrid operation Multi-timescale Solar-storage system Regulating reserve Robust optimization Uncertainty in renewable energy generation and load consumption is a great ...

2. Operation mode of energy storage power supply and grid dispatch coordination system In order to improve the coordinated control effect between energy storage power sources and power ...
