-----

A salt-air battery that lasts for decades could become a backbone technology for renewable energy grids, enabling clean power storage at massive scale without supply-chain or safety risks.

The rising number of electric cars means an even larger wave of battery storage is rolling towards Germany and many other countries. The boom of batteries and many other storage ...

This includes areas that ensure the supply of goods and services considered essential. Besides energy and water supply, this includes the food industry and health care, ...
