What is the difference between a 12V and 24V inverter?

The difference between a 12V and 24V inverter is the amount of input volts it can handle. This is the voltage flowing from the battery into the inverter before the electricity is converted from DC to AC. So a 12V inverter is designed for 12 volts input from the battery. And a 24V inverter is designed for 24 volts input from the battery.

How much battery does a 24 volt inverter use?

For 24-volt inverters, it is 10 %. The battery capacity for a 12-volt Mass Sine 12/1200, for instance, is 240 Ah, while a 24-volt Mass Sine 24/1500 inverter would require at least 150 Ah. The indicated battery capacity is only for the inverter. The capacity required for other loads should be added to it. How much power does an inverter consume?

Are 24V inverters good?

24V inverters offer better performance with more power intensive systems such as homes or larger appliances. Usually, 24V inverters are great for 1000 - 5000 watt inverters. You don't need to go too much further into inverter voltage. All you really need to know is that you should always match the inverter and voltage battery.

Is a 12V battery better than a 24v battery?

No, one is not better than the other. You should always match your inverter input voltage and battery input voltage otherwise it will not work correctly and risks damage. That means a 12V battery with a 12V inverter and a 24V battery with a 24V inverter.
