How much does a commercial lithium battery energy storage system cost?

In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region depending on economic levels.

How much does a battery energy storage system cost?

In 2025, the typical cost of commercial lithium battery energy storage systems, including the battery, battery management system (BMS), inverter (PCS), and installation, ranges from \$280 to \$580 per kWh. Larger systems (100 kWh or more) can cost between \$180 to \$300 per kWh. How does battery chemistry affect the cost of energy storage systems?

How much does a lithium ion battery cost?

Lithium-ion batteries, such as those using Lithium Iron Phosphate (LiFePO₄), are more expensive than lead-acid batteries but offer higher efficiency, longer lifespan, and better energy density. For instance, a 10 kWh lithium-ion battery typically costs \$7,000-\$10,000, while equivalent lead-acid options range from \$2,000-\$5,000.

How much does commercial battery storage cost?

For large containerized systems (e.g., 100 kWh or more), the cost can drop to \$180 - \$300 per kWh. A standard 100 kWh system can cost between \$25,000 and \$50,000, depending on the components and complexity. What are the costs of commercial battery storage?
