-----  
How much energy does North Korea use?

Primary energy use in North Korea was 224 TWh and 9 TWh per million people in 2009. The country's primary sources of power are hydro and coal after Kim Jong Il implemented plans that saw the construction of large hydroelectric power stations across the country.

Does North Korea have a power shortage?

North Korea suffers from chronic energy shortages. Rolling blackouts are common, even in the nation's capital, while some of the poorest citizens receive state-provided electricity only once a year.

What are North Korea's main sources of electricity?

The country's primary sources of power are hydro and coal after Kim Jong Il implemented plans that saw the construction of large hydroelectric power stations across the country. According to The World Bank, in 2021, 52.63% of North Korea's population had access to electricity.

Does North Korea have energy security challenges?

Access to solar panels has created capacity where the state falls short, but the overall energy security challenges facing the nation are daunting. This report, "North Korea's Energy Sector," is a compilation of articles published on 38 North in 2023 that surveyed North Korea's energy production facilities and infrastructure.

And you're probably thinking: "How does one even get reliable data about North Korea's energy sector?" Well, grab your metaphorical shovel - we're digging into 2025's most intriguing ...

By allocating resources to renewable energies and storage systems, North Korea could enhance its internal energy stability and establish itself as a significant contributor to the worldwide shift ...
