How much does a solar system cost per watt?

As of publishing, the average cost per watt is \$2.84. Most solar companies set the price according to the solar system's wattage. A solar installation's "cost per watt" is a little like the "price per square foot" when you buy a house. It helps compare the value of solar energy systems in different sizes.

How much do commercial solar panels cost?

Generally, installing solar panels on businesses costs a bit less per watt because the systems are larger, but the total costs will be higher. In 2025, the average cost for commercial solar panels is just about \$2.00 per watt. There is a lot to consider when figuring out how much you'll spend on a solar installation.

How do you calculate solar cost per watt?

Calculating solar price per watt is pretty simple. Simply divide the cost of the system (in dollars) by the size of the system (in watts). $PPW = \text{System cost} / \text{System wattage}$ Now, solar systems are typically sized in kilowatts (kW), so you'll have to multiply by 1,000 to convert to watts.

How much does a 5500 watt solar system cost?

For example, the PPW of a 5,500 Watt system looks quite different before and after accounting for the 30% tax credit. According to the Solar Energy Industries Association, the average price per watt for residential solar projects was \$3.27 in the first half of 2023.
