Where should a battery backup be installed?

Many homeowners opt to install their battery backup in the garage, basement, or utility room. Be sure to leave enough space around the unit for airflow and maintenance access. Your battery backup system will also need to be placed near your electrical panel for easy integration. This step can be broken down into a few key components:

What is a home battery backup system?

A home battery backup system is essentially a large rechargeable battery that stores electricity. This power can then be used to keep essential devices running when the main power grid goes down. It works by storing excess power when electricity is abundant, such as during the day with solar panels, and using it during outages or peak demand times.

How to choose a battery for a backup system?

Use a power meter to determine their energy consumption in watts. The total wattage will help you decide the battery size. The two most popular types of batteries for backup systems are lithium-ion and lead-acid. Lithium-ion batteries are more compact, have a longer lifespan, and are more efficient, but they are also more expensive.

How do you test a battery backup system?

Some backup systems allow you to connect only essential circuits (e.g., lighting, appliances) to the battery system. After installation, test your battery backup system by simulating a power outage. Turn off the main circuit breaker and check if the devices connected to the backup system remain powered.

If your electrician or contractor has any questions or isn't sure how to install the battery backup generator, they can call Medi-Products. Our team of experts will help guide them through the ...
