How do I know if my tineco vacuum mop battery is bad?

My model of tineco vacuum mop are comprised of 6 pieces of 21700 batteries,each piece of 21700 battery should output around 3.7V. Use a multimeter to measure each of the cell to identify the bad battery cell. If certain battery cell has voltage far below the 3.7V,that's mean that particular battery cell is faulty.

What is a 21700 battery?

A 21700 battery is a high capacity lithium ion rechargeable battery. Their proper name is a "21700 cell". The 21700 cell has voltage of 3.7v and has between 3000 mAh and 5100 mAh (mili-amp-hours). The 21700 is physically larger than an 18650 battery,and AA/AAA batteries.

What is the difference between a 21700 and a smaller battery?

One of the standout features of the 21700 is its higher capacity and energy density compared to smaller batteries. This allows it to power larger devices,such as electric vehicles and solar energy storage systems,with more reliable performance and fewer recharges. As mentioned earlier,the 21700 battery is 21mm in diameter and 70mm in length.

How to remove tineco vacuum mop battery?

Removing Tineco Vacuum Mop Battery Step 1: To start process, first it is important to remove the cover and to rotate display of the Tineco vacuum mop to do that. As you can see from the image above, I rotated the display cover clockwise and it could be removed easily.

Feb 14, 2025 · The battery cells are connected using spot welding technique, and you would need a spot welder to join these battery cells together. Make sure you choose good quality ...
