What are the different types of solar inverters?

When it comes to home solar installation, homeowners have three types of solar inverters to consider: string inverters, string inverters with DC power optimizers and microinverters. Each inverter setup comes with upsides and downsides. Here's what you should know.

What type of solar inverter makes the most sense?

Those are the kinds of things that can make a real difference in what type of inverter solution makes the most sense," Kurchin added. When it comes to home solar installation, homeowners have three types of solar inverters to consider: string inverters, string inverters with DC power optimizers and microinverters.

What is a solar inverter?

A solar inverter, or solar panel inverter, is a device that converts the direct current (DC) output of solar panels into alternating current (AC). Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use.

How do solar inverters work?

Solar inverters also come in the form of micro-inverters. Unlike string inverters, micro-inverters are attached to each solar panel. This setup allows each panel to convert DC to AC independently. Micro-inverters enhance efficiency, especially in situations where individual panels experience different shading or sunlight conditions.
