Who is Bergen Engines?

Bergen Engines is focused on the future of the energy industry, offering a range of flexible solutions and services tailored to meet our customers' diverse needs. With our expertise, we provide reliable, cost-efficient, futureproof solutions across various sectors including modular power generation, CHP, hybrid microgrids, utilities, and mining.

How do power plants in Norway work?

Many power plants in Norway have storage reservoirs and production can therefore be adjusted within the constraints set by the licence and the watercourse itself. Wind and solar power are intermittent; electricity can only be generated when the energy is available. The same applies to run-of-river power plants and small-scale hydropower plants.

What factors should be considered when exploring the energy industry in Norway?

When exploring the energy industry in Norway, several key factors should be considered. Norway is a global leader in renewable energy, particularly hydropower, which accounts for a significant portion of its electricity generation.

Does Norway have hydropower?

Hydropower accounts for most of the Norwegian power supply, and the resource base for production depends on the precipitation in a given year. This is a significant difference compared to the rest of Europe where security of supply is mainly secured through thermal power plants, with fuels available in the energy markets.

Dec 6, 2025 · In Øy garden, outside Bergen, CCB Energy Holding offers climate-focused industries, while also enabling synergies with traditional ...
