-----  
How much does a 10kW Solar System cost?

Nationwide, an average 10kW solar energy system costs roughly \$21,000 after a 30% tax credit. The average 10kW solar panel system can pay for itself in a little over eight years. If you're interested in going solar, it's often easier to work with a professional solar installer to ensure you get the right size system for your needs.

What is a 10kW solar energy system?

A 10kW solar energy system can provide all the electricity the average home needs and probably more. In other words: The excess energy produced by your solar panels can be sent back to the grid, allowing you to make money from it. If you're connected to the power grid, a 10kW solar panel array can functionally offset all of your utility energy use.

Is a 10kW Solar System a waste?

If you're looking to go off the grid, a 10kW solar power system would likely be a waste unless you invest in a solar battery to capture the extra power produced during the day and make that power available when the sun's not shining. How much energy can a 10kW solar system produce?

Can a 10kW solar system offset energy use?

If you're connected to the power grid, a 10kW solar panel array can functionally offset all of your utility energy use. We say "functionally" because, while a 10kW system likely produces more energy than your home uses, only part of your energy consumption takes place during the day while your panels are producing power.
