---

In this study, optimal peak clipping and load shifting control strategies of a Li-ion battery energy storage system are formulated and analyzed over 2 years of 15-minute interval ...

Beijing's 798 Art Zone is currently seeking bids for a peak shifting energy storage demonstration project. According to the reports, the project is to be 0.5MW/1.5MWh in size ...

Several energy storage technologies are emerging that shift electrical power load from peak to off-peak times, reducing the cost of power and the need to build expensive new generating capacity.
