Do I need a custom power supply?

Unfortunately, most audio products (DACs, amplifiers, servers) will require a custom solution. In essence, a better power supply will sonically "align" the complex analog and digital signal into something that's properly outlined and shaped. This alignment is responsible for the tighter lines and an overall more insightful listening experience.

What is a portable power supply?

A portable power supply is a device that can store and provide electrical energy for various purposes. It can power small appliances, charge electronic devices, or supply emergency backup power in case of a blackout. Portable power supplies are usually rechargeable and have different capacities and features depending on the intended use.

Why do we offer fully customized power module design & development services?
