Can a portable generator power an entire house?

A portable generator can supply emergency electrical power to a residence when the primary power source fails. It can power only the most necessary services, such as lighting, a TV, and a refrigerator. All other equipment in the house should not be considered.

How do you connect a portable gas generator to a house?

There are two ways to connect a portable gas generator to a house: either by connecting each appliance to a separate cord or by using a transfer switch to power a circuit panel. This is a common question during hurricane season: 'What's the difference between extension cords, generator cords, and utilizing a switch?'

How do I safely connect a generator to my house?

Check the following safety issues when connecting a generator to your house. A transfer switch is a device installed next to your circuit breaker panel. It allows you to safely switch between grid power and generator power without the risk of backfeeding electricity into public utility lines. There are two main types:
