How useful is the 220V AC socket in the Prado 150?
220V AC socket in the Prado 150 - how useful is it? It's a 220V AC socket that is rated for 100W.. and it seems like its not particularly useful. Supply obviously comes from the vehicles single battery,and it only gets power when the vehicle is running.

Is there a 12V DC socket in my Prado?
Most gear like tire air compressors or camping fridges run on 12V in any rate,yet there is no 12V DC socketin the back of this Prado that I can find. Also a 12V socket would have been better as I suppose their are less losses than converting the 12V to 220V.

Can a 220V socket be used as a laptop charger?
As for your main question,the 220V socket is uselessfor anything besides laptop or cellphone charger. You can't even charge the ecoflow on it,even if you set the charge rate to 100W. Also you can't replace the factory inverter with a bigger one. Apparently,no space &wiring isn't compatible.

How much power does a 240V inverter take?
The power supply for the fridge when running on 240V would only be about 75% efficient therefore it would be taking about 3.75Aform the inverter. The inverter is again proberly about 75% efficient so the inverter would be pulling around 4.7A from the battery when it's running. Not very efficent!
