How much does a Bess battery cost?

Core equipment - mainly the BESS enclosures, the Power Conversion System (PCS) and the Energy Management System (EMS) - costs around \$75/kWh when delivered from China, for countries with low import duties. This cost is per unit of usable battery capacity.

How much does a Bess system cost?

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices

How much does a Bess enclosure cost?

The enclosures account for close to 90% of the \$75/kWh core equipment cost for long duration projects, with PCS and EMS costs making up around 10%. The \$75/kWh applies to larger, four-hour or longer BESS projects. Smaller projects may not get such competitive quotes from Chinese manufacturers.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW /4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

How containerised BESS costs change over time. Grid connection costs. Balance of Plant (BOP) costs. Operation and maintenance (O&M) costs. And the time taken for projects to progress ...
