What is the capacity of battery energy storage system design in Europe?

By the end of 2023, the cumulative installed capacity of battery energy storage system design in Europe will reach 35.9GWh, with Germany and Italy contributing more than 50% of the market share.

What is the growth rate of energy storage?

Industrial and commercial energy storage is expected to grow steadily during this period, increasing its share to 25%. This trend shows that although the growth rate of household energy storage has slowed, the growth of large-scale energy storage will make up for this shortfall and promote the continued expansion of the market.

Why did Germany's storage price decline accelerated over the past two years?

The price decline accelerated over the past two years due to increased competitive pressure. According to information from EUPD Research's "Price and Inventory Tracker," the price index for private storage systems up to 20 kWh in Germany fell by more than 50% between the first half of 2023 and the first half of 2025.

Will large scale energy storage projects reach a new high in 2024?

The European Photovoltaic Industry Association predicts that the installed capacity of large scale energy storage projects will reach a new high in 2024, becoming the main driving force of the market.
