-----  
Is the European battery storage market ready for 2029?

Despite positive market developments, SolarPower Europe stresses that the European battery storage market needs to grow at an even faster rate to meet the rising demand for grid flexibility. A potential total volume of up to 400GWh is projected for 2029- an ambitious but necessary target for the energy transition.

How can European policymakers help the battery storage sector?

Recommendations How can European policymakers help the battery storage sector Battery storage systems are essential for strengthening the EU's energy security and competitiveness by enhancing flexibility, providing ancillary services to secure the grid, maximising the use of renewable energy, and effectively dealing with energy price volatility.

How many energy storage installations are there in Europe?

The total number is slightly higher than the 2024 figures released a couple of months ago by the European Association for Storage of Energy (EASE), which, in partnership with the consultancy LCP Delta tallied 21.1GWh of installations last year in its ninth annual European Market Monitor on Energy Storage (EMMES) report.

How many battery energy storage systems were installed in Europe in 2024?

21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking installations, and bringing Europe's total battery fleet to 61.1 GWh. However, the annual growth rate slowed down to 15% in 2024, after three consecutive years of doubling newly added capacity.
