-----  
What is the electricity generating capacity in Saint Lucia?

Total electricity generating capacity in Saint Lucia is about 93 MW. Fossil fuel-based generating capacity, operated by St. Lucia Electricity Services, Ltd. (LUCELEC), amounts to 88.4 MW, about 95 percent of total electricity generating capacity. Installed generating capacity from renewable energy is 4.7 MW, of which LUCELEC operates 3 MW.

How can Saint Lucia achieve its planned energy transition?

The path to Saint Lucia's planned energy transition requires massive deployment of an applicable set of proven clean-energy technologies, taking advantage of the country's full renewable energy potential, particularly solar, wind, and geothermal resources.

Is Saint Lucia a good place to get electricity?

Saint Lucia has substantial potential for electricity generated by renewable energy. Solar energy potential is estimated at 36 MW, equivalent to about 41 percent of installed capacity for electricity generation using fossil fuels. Moreover, Saint Lucia is estimated to have huge geothermal resource potential, about 680 MW.

Why does Saint Lucia depend on imported petroleum products?

Saint Lucia relies on imported petroleum products for energy production. This dependence on tourism and imported petroleum products to support economic development goals has made Saint Lucia highly vulnerable to factors outside the country's control.

Jul 15, 2025&ensp;&#0183;&ensp;Saint Lucia will have installed 5 MW of solar power by the end of 2024, up from 4 MW by the end of 2023, according to figures from the International Renewable Energy Agency ...

Saint Lucia smart energy storage project This is the largest storage portfolio under construction in Mississippi, and Origis expects to commission all three projects next year.
