How is energy stored in Australia?

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup. To balance energy use across the Australian economy, heat and fuel (chemical energy) storage are also required.

What are energy storage cabinets?

Designed to seamlessly integrate with your existing power infrastructure, these cabinets offer efficient energy storage in a compact, robust form factor. They are ideal for facilities requiring a clean and organised power management system while maintaining high energy capacity and reliability.

What is a 125kW / 261kWh energy storage cabinet?

The EVE 125kW / 261kWh Liquid-Cooled All-in-One Energy Storage Cabinet is engineered to deliver dependable, efficient, and flexible energy management across a wide range of applications. From peak-load management to renewable energy integration, it helps businesses optimise power usage, lower operating costs, and strengthen energy resilience.

How does energy storage work?

It works on and off the grid, in passenger and freight transportation, and in homes as 'behind the meter' batteries and thermal stores or heat pump systems. Energy storage in the form of heat can also help to reduce the costs and emissions from industry. Energy can be stored as:

Whether it's for harnessing solar energy more effectively with solar energy storage cabinets or ensuring uninterrupted power, a well-chosen system will serve you efficiently for years to ...
