What are the different types of distribution boxes?

**Metal Distribution Boxes:** This kind of box is generally constructed using either steel or aluminium. These are often placed in locations where there are safety requirements such as structures that need to be fire resistant.

**Plastic Distribution Box:** They are constructed out of non-metallic materials, such as PVC or polycarbonate.

What are distribution boxes?

Distribution boxes are crucial for protecting electrical connections and ensuring safety in electrical systems. They are constructed from various materials, with the choice depending on factors such as the application environment, durability requirements, regulatory compliance, and cost considerations.

What materials are used in the construction of distribution boxes?

Distribution boxes are commonly constructed using metals and other materials. Some of the most widely used metals include:

What is a metal distribution box?

A metal distribution box is a type of distribution box constructed from metals like steel or aluminum. Metals are widely used due to their durability, strength, and suitability for various environments. They offer excellent protection against physical impact and environmental hazards.
