What is solar power storage?

Strictly speaking, solar power storage is not just a battery but a rechargeable solar battery. In case of strong solar radiation the generated solar energy exceeds the energy demand of the house. The excess energy is passed into the solar battery and charges it, like a battery.

What is a PV power station?

A PV Power station is also known as a photovoltaic (PV) power plant. It is designed for large-scale installations to convert sunlight into electrical energy by using the photovoltaic effect. The PV Power station consists of the following components that work together to produce clean electricity:

- Solar panels
- Inverters

Why are PV power stations important?

Global warming is a huge environmental concern, and clean energy is no longer an option. That's one of the solid reasons why PV Power station solutions have become central in energy planning and eco-friendly development.

What is a solar photovoltaic power station?

A solar photovoltaic power station is a single power station, designed by a single developer (or consortium), and usually has a single outlet connection to the grid. In some cases, it can be deployed on several nearby lands and/or built across multiple stages.
