What is a solar refrigeration system?

It is the refrigeration system that runs on the solar energy where the power is supplied not by the electrical supply system, but from the solar panel. In this process we produce refrigeration effect with the help of energy of sun and thermal energy or photovoltaic may be included in this.

What are solar-powered absorption refrigeration systems?

Solar-powered absorption refrigeration systems offer a sustainable and energy-efficient alternative to conventional cooling technologies by utilizing solar thermal energy rather than mechanical compression.

How can solar energy be used for refrigeration?

The first approach involves utilizing a PV-based solar energy system, which converts solar energy into electrical energy and applies it to refrigeration in a manner similar to traditional methods (Gunapriya et al., 2022). The second one is cooled through thermoelectric processes (Rajasekaran et al., 2022).

Can solar refrigeration be used for cold storage?

Hamid et al. presented a techno-economic study for a solar refrigerator system where PV refrigeration was used for cold storage and compared with a system without a solar system (Ikram et al., 2021).
