How much does the energy storage system cost?

The energy storage system is a 4MW,32MWh NaS battery consisting of 80 modules,each weighing 3 600 kg. The total cost of the battery system was USD 25 millionand included USD 10 million for construction of the building to house the batteries (built by Burns &McDonnell) and the new substation at Alamito Creek.

How much does a gas storage system cost?

Generally speaking,the cost of the gas storage tank is the most expensive part of the entire system. Operation and maintenance costs include energy consumption and equipment maintenance. The current cost of compressed air energy storage systems is between US\$500-1,000/kWh.

How are battery energy storage costs forecasted?

Forecast procedures are described in the main body of this report. C&C or engineering,procurement,and construction (EPC) costs can be estimated using the footprint or total volume and weightof the battery energy storage system (BESS). For this report,volume was used as a proxy for these metrics.

Why is energy storage cost important?

One of the key considerations when it comes to energy storage is cost. Energy storage cost plays a significant role in determining the viability and widespread adoption of renewable energy technologies. The cost of energy storage is a crucial aspect to consider when evaluating the feasibility and scalability of renewable energy systems.
