Tier 1 solar panels come from manufacturers that use top-quality materials and provide better warranties. Typically, they offer a 12-year product warranty and a 25-year linear performance warranty. Tier 2 solar panels have shorter warranties and possibly less durability due to their lower-quality materials.

However, with Tier 1 solar panels, the chances of the solar panels having defects are lower. Tier 1 solar panels are typically 10-30% more expensive than Tier 2 solar panels. Are Tier 1 solar panels worth it?

If your project is a significant one, Tier 1 is the way to go. Tier 2 Panels: Now, Tier 2 can be a cost-effective choice. But don't jump in just yet; take your time to research the brands and their warranties. Some Tier 2 options hold their own against their Tier 1 counterparts, but choose wisely. Tier 3 Panels: It's best to steer clear from these.

As such, there are no official lists of Tier 2 or Tier 3 solar companies. However, people in the solar industry needed an easy term to describe all the non-Tier 1 manufacturers, and Tier 2 is the unofficial catch-all term that's used. Tier 1 solar manufacturers are believed to make up no more than 2% of all solar manufacturers in the business.

Aug 11, 2024 · …For homeowners with less than adequate funds for the initial installation, you can choose secondary solar panels. It is only second in quality to the primary solar panels and also ...
