What are Victoria's natural wetlands?

Victoria's natural wetlands are diverse and include billabongs, marshes, meadows, lakes, alpine peatlands, intertidal saltmarshes, mangroves, mudflats, and seagrass areas.

Is there a trend in wetland inundation in Victoria?

Recent studies indicate there's a decreasing trend in wetland inundation in some regions and wetland types in Victoria. Wetland inundation occurs when continuous wet conditions cause the soil to become saturated or covered with water ('inundation'). This inundation is a fundamental requirement for good wetland health.

Why are wetlands important in Victoria?

Provide refuge during periods of drought. By supporting 24% of Victoria's threatened native species, wetlands play an integral part in protecting our native wildlife. Wetlands support local tourism and the economy. People enjoy boating, camping, bird watching, fishing and duck hunting at wetlands.

How many wetlands are there in Victoria?

With 12 Ramsar-listed wetlands, Victoria possesses some of the most important wetlands in the world. The Victorian Government plays an important role in protecting and managing our wetlands and the values they support. The Government has demonstrated their commitment to meeting our obligations under the Ramsar Convention by investing:
