-----  
Can a solar-wind system meet future energy demands?

Accelerating energy transition towards renewables is central to net-zero emissions. However, building a global power system dominated by solar and wind energy presents immense challenges. Here, we demonstrate the potential of a globally interconnected solar-wind system to meet future electricity demands.

Are solar and wind resources interconnected?

Theoretically, the potential of solar and wind resources on Earth vastly surpasses human demand 33, 34. In our pursuit of a globally interconnected solar-wind system, we have focused solely on the potentials that are exploitable, accessible, and interconnectable (see "Methods").

Where do grid-boxes contain solar and wind resources?

In densely populated regions such as western Europe, India, eastern China, and western United States, most grid-boxes contain solar and wind resources apt for interconnection (Supplementary Fig. S1). Nevertheless, these regions exhibit modest power generation potential, typically not exceeding 1.0 TWh/year (Fig. 1a).

How much electricity can a solar-wind power plant generate?

Our estimates suggest that the total electricity generation from global interconnectable solar-wind potential could reach a staggering level of [237.33 &#177; 1.95] &#215; 10 &#179; TWh/year (mean &#177; standard deviation; the standard deviation is due to climatic fluctuations).

4 days ago &#183; &#183; Integrated Solar-Wind Power Container for Communications This large-capacity, modular outdoor base station seamlessly integrates photovoltaic, wind power, and energy ...

Nov 29, 2025 &#183; &#183; It combines wind and solar power generation, city power and battery energy storage to provide green, stable and reliable communication base stations. Power is different ...
