What if Syria doesn't have reliable energy supplies?

The lack of reliable energy supplies is a major concern for Syrian citizens and its new government, making it a key point of leverage. Qatar and Turkey have stepped in to provide short-term assistance. The two states have provided two floating power stations, while Turkey is also connecting its grid to Syria.

What type of electricity is used in Syria?

Renewable electricity here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal power. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Syria: How much of the country's electricity comes from nuclear power?

How many kilowatt-hours of electricity does Syria generate?

In 2010, Syria generated almost 44 billion kilowatt-hours of electricity, 94% of which came from conventional thermal power plants. The remaining 6% came from hydroelectric power plants. Refined petroleum products and natural gas fuel Syria's thermal generating facilities.

Does Syria have a power plant?

Syria's electricity infrastructure, including power plants, substations, and transmission lines, has been a frequent target of sabotage. In 2010, Syria generated almost 44 billion kilowatt-hours of electricity, 94% of which came from conventional thermal power plants. The remaining 6% came from hydroelectric power plants.
