What should I do if my battery is not working?

Shut Off the Power (If Safe to Do So) If it's safe to do so, and there are no immediate threats to your safety, shut off the power to your battery storage system. This can help to prevent further electrical damage and reduce the risk of additional fires or explosions. Turn off the main electrical panel.

How to prevent excessive battery heating?

To prevent excessive battery heating caused by environmental conditions, several measures can be taken. Firstly, it is important to avoid exposing the battery to extreme temperatures, both hot and cold. This can be done by storing the battery in a cool and dry place, away from direct sunlight and heat sources.

What should I do if my battery is too hot?

If you find that your battery has become excessively hot, it is important to take immediate action to cool it down and prevent any potential damage. Here are some steps you can take to cool down a hot battery: Give the battery a break and allow it to cool down before using it again.
