Who makes power inverters?

Chinese companies are the biggest manufacturers of power inverters, used by manufacturers of solar panels, wind turbines and other types of renewable power components around the world.

Are Chinese power inverters being used on solar panels?

U.S. officials have discovered undisclosed communication devices on Chinese-made power inverters that were being used on solar panels, Reuters reported today based on anonymous sources within the federal government. The inverters are devices separate from power sources like solar arrays or batteries.

Are Chinese-made solar inverters a 'rogue' communication device?

The issue could be important to facilities managers if they oversee on-site solar arrays or battery storage systems, with Chinese-made inverters on them, to provide energy resilience. Back view of solar panels with inverters. U.S. officials say some inverters from China have "rogue" communication devices on them. romaset via Getty Images

How do inverters work?

The inverters are devices separate from power sources like solar arrays or batteries. They're attached to the power sources to convert direct current to alternating current before it's transferred to the utility grid. The inverters include communication capabilities so technicians can monitor performance and have remote access for maintenance.
